

Python Developer

KisanHub is a multi-award-winning software solution for the agrifood industry. Our platform is designed to improve the management and communication of complex data throughout the agricultural supply chain, providing our clients with the means to improve collaboration and to minimise waste.

Job description

We're looking for an enthusiastic and talented developer to work on our platform. While the main focus of the work will be developing our Django-based RESTful APIs, you'll also have the opportunity to work with Kubernetes and serverless programming on Google Compute Platform. We use Angular 10+ exclusively on our front end projects, and we're looking for someone with versatility to work on the front end when required, or an interest in becoming full stack.

Since we're a small team you'll get lots of opportunities to learn new stuff, solve interesting problems, and build a platform with thousands of users all over the world.

As a young and agile start-up, we're always looking to capitalise on the latest languages and platforms: an ideal candidate would be adept at picking up and adapting skills and methodologies.

Location

Our engineering process has always been constructed around remote working, even before Covid-19. We spend a lot of time on communication and processes to make this work effectively, strongly believing that developers are most productive when they're working where they want to work.

As such, we're happy for you to work remotely most of the time, but we think it's equally important to be able to meet face to face occasionally, so the ideal candidate should be within reasonable travelling distance from our Cambridge office.

Essential Experience & Skills

- Expert Python
- Experience of API design
- Excellent communication skills

Nice to Have

- Django
- Angular

What we offer

If you can write software to take agriculture to the next level, you're in the right place. In return, we offer a competitive salary, a unique start-up culture, a team with the best worldwide developers, and an opportunity to positively impact the lives of farmers globally.

If you would like to apply for this role, please get in touch and send your CV to Nick on nick@kisanhub.com
